<p>What is Fire Prevention? It is an interdisciplinary field that studies and implements the measures to: - Avoid the occurrence of a fire - Limit the consequences</p>
<p>And when it does apply Fire Prevention. In all workplaces is an obligation of the employer to prepare a risk evaluation, that includes the evaluation and preventions of a possible fire.</p>
<p>Keep away the present people helping who is in trouble: - Lock well the door behind, being secure that nobody is inside, waiting for help. - Follow every general order of building evacuation or all clear.</p>
<p>What to do in case of use of equipment? Follow the instructions supplied with the machine operation and maintenance manual - Verify the presence of the fixed/mobile/adjustable protections preventing the ejection of objects or access to moving parts</p>
<p>The MOST COMMON risks. The video operator. What is a video display unit? It is a graphics alphanumeric screen, regardless of the type of display.</p>
<p>what is a video operator? It's a worker who uses equipment that features video display units, in a systematic and frequent way, for at least 20 hours a week.</p>
<p>What are the possible health issues of someone using equipment featuring video display units? • Eye/vision disorders • Musculoskeletal disorders VISUAL APPARATUS DISORDERS are mainly due to an elevated stimulation and fatigue of the eyes.</p>
<p>What can be done about it? Position the screen correctly in relation to natural light sources in order to avoid reflections and dazzling effects and, if necessary, adjust curtains/blinds in order to avoid too strong a light.</p>
